

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-20. **(Cancelled)**

21. **(Currently Amended)** A method for preparing metal salts of unsaturated, short-chain carboxylic acids by reacting in a solution

- a metal-alcoholate compound and
- a compound selected from the group consisting of carboxylic acids of the general formula:

wherein the double bond is in the 2- or 3-position and

n represents 2, 3, 4, 5, or 6, maleic acid and mixtures thereof, in the presence of oxygen (O₂), which is continuously fed so that ~~its concentration in~~ the reaction solution is at least 50 % oxygen-saturated, to produce metal salts having at least one group of the formula

and a metal (M) selected from the group consisting of

Al, Si, Sn, La, Zr, Cu and Zn and mixtures thereof.

22. **(Previously Presented)** The method of claim 21, characterized in that oxygen is continuously fed so that the reaction solution is at least 90 % oxygen-saturated.

23. **(Previously Presented)** The method of claim 21, characterized in that the metal salts have the general formula

and can be obtained by reaction of a linear or branched, unsaturated carboxylic acid of the formula

wherein n represents 2, 3, 4, 5, or 6 with the double bond in 2- or 3-position, preferably in 2-position, with a metal compound of the general formula

and, optionally,

wherein

a is at least 1,

b is 0, 1, 2 or 3 and

(a+b) and c are independently of one another an integer of 2 to 4,

R¹ represents an alcoholate group having a C₁ - to C₆ hydrocarbon residue,

wherein R¹ is a saturated, linear or branched alcoholate group, which can be obtained from an alcohol having at least one -OH group, wherein the -OH groups are preferably primary or secondary -OH groups,

or

wherein R^2 and respectively R^3 represent $-CH_3$, $-C_2H_5$, $-C_3H_7$ or $-C_4H_9$ and n, R^1 , R^2 , and R^3 may be different for each a, b, and c and at least one R^1 in $M(R^1)_c$ represents an alcoholate group having a C_1 - to C_6 hydrocarbon residue.

24. **(Previously Presented)** A method according to any one of claim 21, characterized in that the reaction is carried out in the presence of continuously fed oxygen in a gas mixture containing the oxygen in a concentration from 5 to 30, preferably 15 to 25 vol%.
25. **(Previously Presented)** A method according to any one of claim 21, characterized in that the reaction is carried out at temperatures from 0 to 150 °C, preferably 20 to 100 °C.
26. **(Previously Presented)** A method according to any one of claim 21, characterized in that the reaction is carried out at pressures from bar_{abs} to 0.01 bar_{abs} .
27. **(Previously Presented)** A method according to any one of claim 21, characterized in that the reaction is carried out without a solvent.

28. **(Previously Presented)** A method according to any one of claim 21, characterized in that the reaction is carried out in at least one of the following solvents: hydrocarbons, esters, ethers, glycols, and glycol mono- or diethers.
29. **(Previously Presented)** A method according to any one of claim 21, characterized in that the carboxylic acid is acrylic acid or methacrylic acid.
30. **(Previously Presented)** A method according to any one of claim 21, characterized in that the metal M is Al, Si, Sn, La, Zr, or Cu, particularly aluminium and/or zirconium, preferably aluminium.
31. **(Previously Presented)** A method according to any one of claim 21, characterized in that the metal compound is a metal alcoholate.
32. **(Previously Presented)** A method according to any one of claim 21, characterized in that the reaction is carried out in the absence of water (less than 100 ppm).
33. **(Previously Presented)** A coating or additive for coatings and rubbers comprising a metal salt, according to claim 21, having at least one unsaturated carboxyl group with 3 to 7 carbon atoms in the carboxyl group or the reaction products thereof.

34. **(Previously Presented)** A coating for leather, glass, ceramics, paper, cardboard, plastics, metals, and textiles comprising a metal salt according to claim 21.
35. **(Previously Presented)** A composition comprising a metal salt according to claim 21 having at least one unsaturated carboxyl group with 3 to 7 carbon atoms in the carboxyl group as a monomer, particularly a co-monomer used in polymerizations, especially free radical and/or photoinitiated polymerizations.
36. **(Previously Presented)** An additive for use in radiation-curing adhesives- or plastics compositions, particularly UV-curing ones, each of which furthermore can contain photoinitiators, particularly UV initiators comprising a metal salt according to claim 21 having at least one unsaturated carboxyl group with 3 to 7 carbon atoms in the carboxyl group.
37. **(Previously Presented)** An additive for use in printing-ink compositions, particularly as a radiation-curing monomer, comprising a metal salt according to claim 21 having at least one unsaturated carboxyl group with 3 to 7 carbon atoms in the carboxyl group
38. **(Previously Presented)** A rheology modifier, particularly in printing-ink resins comprising a metal salt according to claim 21 having at least one

unsaturated carboxyl group with 3 to 7 carbon atoms in the carboxyl group or the reaction products thereof.

39. **(Previously Presented)** A barrier coating or additive therefore for foils preventing permeation of oxygen and/or water comprising a metal salt according to claim 21 having at least one unsaturated carboxyl group with 3 to 7 carbon atoms in the carboxyl group or the reaction products thereof.

40. **(Previously Presented)** A composition of any one of claims 33 to 39, characterized in that the composition containing said metal salt additionally contains

- 1 to 5 wt.% photoinitiators, particularly aromatic ketones, optionally alkylated and/or alkoxyated ones, preferably with C₁- to C₄ alkyl- and/or alkoxyate groups, and/or
- 0.05 to 2 wt.% UV- and/or radical stabilizers, particularly alkylated and/or alkoxyated hydroxy aromatics, preferably phenols and independently thereof having C₁- to C₄ alkyl- and/or alkoxyate groups.
